Increase product development agility and speed to market

"

We evaluated a number of product lifecycle management systems. We needed one that was flexible, accessible from anywhere, and simple to use. We chose Autodesk PLM.

In the first 5 months we reduced our engineering release time by up to 49%.

"

Reducing non value-add processes

"

Consistent, visible, repeatable processes are now in place, which are mandatory and fully traceable.

Improving supply chain agility

"

Supply chain integration is paramount to integrate cost tracking which features detailed economic information from component cost level to a complete product cost roll-up. Autodesk's cloud-based PLM enables Native Instruments to collaborate with internal and external stakeholders like subsidiaries and preferred manufacturers and vendors across the globe.

Accurate product cost calculations took us more than a week in the past. Today we can gather this information in minutes, with just a few clicks in Autodesk PLM, which allows us to make faster and smarter business decisions.

Improving product development agility

"

The solution is deployed to control our engineering change process across our ten manufacturing sites. My favorite feature is the ease at which we can train.

Aclara
Reducing non value-add processes

"

We wanted a cloud-based solution to eliminate the on-premise hardware maintenance and reduce the costs and time associated with implementing system upgrades. The solution reduced our overall costs while being able to take advantage of the newest improvements without the cost and time to implement them.

Improving product development agility

"

It's more than digitalization, it's a digital transformation.

It's a continuous focus on making things as easy as possible for our fabricators and other customers, getting that customer intimacy as close as possible, and delivering the best possible solution.

Improving product development agility

"

Our company has been growing very fast. Installing the Autodesk PLM system helps us satisfy increasing customer demand. It complements our existing CAD and data solutions from Autodesk.

"

Lucas Kaspar
Project Manager

"

With Autodesk we can now cover the CAD, product data management and lifecycle management. **We have a simple "one stop solution."**

Improving product development agility and collaboration

"

Autodesk PLM allows us to design more seamlessly and efficiently in cross-functional teams. These new shifts in work processes are allowing us to be more agile and adaptable, which results in a better end product.

Improving collaboration

"

After our previous PLM solution fell short, we're excited to work with Autodesk. Their solution is meeting our needs with a modern cloud-based system with 3D viewing in the browser. The customer service has been fantastic!

While we didn't initially change our PLM to Upchain because of the pandemic, it has worked seamlessly to connect our teams when working remotely.

"
